Digital Literacy Project Report

Name: Aryan Bardiya
Registration Number: 25BAI10890
Branch: B.Tech CSE(AI-ML)
Year: First Year
Course Code: CSE0001
Course Title: Digital Literacy
Date: March 2026

Introduction

This project was completed as part of the Digital Literacy course, where I took on the role of a Student Digital Ambassador. The objective of this project was to develop awareness and understanding of essential digital tools, online communication, and cyber safety practices. Through five different tasks, I explored various aspects of digital literacy, including creating visual content, building a professional online presence, practicing coding, understanding email etiquette, and learning about cybercrime prevention. This project helped me improve my technical knowledge as well as my ability to use digital platforms responsibly and effectively.

Task 1 Write-up: Digital Literacy Infographic

For this task, I created a digital literacy awareness infographic using Canva. The infographic highlights important topics such as safe internet practices, useful digital tools for students, and maintaining a professional online presence. I focused on making the design simple, visually appealing, and easy to understand for my peers.

While creating the infographic, I learned how to organize information visually and choose appropriate colors and layouts. One challenge I faced was selecting the most relevant content and fitting it into a single page without making it cluttered. Overall, this task helped me understand the importance of clear visual communication and how design can be used to spread awareness effectively.

Task 2 Write-up: Digital Portfolio

In this task, I created and updated my profiles on GitHub, LinkedIn, and Kaggle. GitHub is used for storing and showcasing coding projects, LinkedIn is a professional networking platform, and Kaggle is useful for data science and machine learning practice.

I created a GitHub profile README with my basic details and learning goals, and updated my LinkedIn education section with my current degree. These platforms will help me build a strong digital presence over the next four years. I plan to regularly upload projects on GitHub, connect with professionals on LinkedIn, and improve my technical skills through Kaggle. This task made me realize the importance of having a professional online identity from the beginning of my career.

Task 3 Write-up: Coding & Collaboration Platforms

For this task, I explored both a coding practice platform and a collaboration tool. I used CodeChef to complete a beginner-level problem called "Pattern printing," which helped me understand basic coding logic and problem-solving techniques.

For collaboration, I created a Digital Literacy Awareness Quiz using Google Forms with five questions, including both multiple-choice and short-answer types. I also viewed responses using Google Sheets, which helped me understand data collection and analysis.

These tools are very useful for academic growth. CodeChef will help me improve my programming skills, while Google Forms and Sheets are useful for surveys and collaboration. This task provided practical exposure to important digital tools.

Task 4 Write-up: Email Etiquette and Communication

In this task, I learned the importance of professional communication in emails and social media. Poorly written emails without proper structure, subject lines, or greetings can create confusion and leave a negative impression.

To avoid this, it is important to use clear subject lines, respectful greetings, and wellstructured content. I also learned that maintaining professionalism on social media is essential, as it reflects one's personality and values. This task helped me understand how effective communication can improve academic and professional interactions.

Task 5 Write-up: Cybercrime Awareness

During this task, I researched cybercrimes such as phishing and online fraud. I was surprised to learn how easily people can fall victim to such attacks due to small mistakes like clicking unknown links or sharing sensitive information.

This task made me more aware of online risks and the importance of staying cautious. One habit I will change is verifying all suspicious messages before taking action. I will also avoid sharing personal or financial details online without proper verification. This task helped me understand the importance of cybersecurity in daily life.

Conclusion

This project helped me gain a deeper understanding of digital literacy and its importance in today's world. I learned how to use various digital tools, communicate professionally, and stay safe online. These skills will be useful throughout my academic journey and future career.

Thank You

Thank you for reviewing my Digital Literacy Project. This project has been a valuable learning experience and has helped me improve my digital skills and awareness.
